

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

- ▶ We delay items being put on the screen using `\pause`

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

- ▶ We delay items being put on the screen using `\pause`
- ▶ How great is this?

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

- ▶ We delay items being put on the screen using `\pause`
- ▶ How great is this?

What about equations?

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

- ▶ We delay items being put on the screen using `\pause`
- ▶ How great is this?

What about equations?

$$f(x) =$$

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

- ▶ We delay items being put on the screen using `\pause`
- ▶ How great is this?

What about equations?

$$f(x) = x^2 + 2x$$

# Demo of the beamer package

The beamer package allows you to make  $\text{\LaTeX}$  documents into slide presentations.

- ▶ We delay items being put on the screen using `\pause`
- ▶ How great is this?

What about equations?

$$f(x) = x^2 + 2x$$

You can put `\pause` in most environments.
